

# APPARATUS AND METHOD FOR SUPPORT OF ELECTRONIC COMPONENTS

## ABSTRACT OF THE DISCLOSURE

Apparatuses and a method are provided for supporting electronic equipment. A base supports a pair of vertical supports. The vertical supports are mounted generally parallel to each other in a first plane and extending in the first plane in a first direction from the base. At least one component support is supported by the vertical supports. The component support includes a pair of support members that generally are mounted parallel to each other in a second plane perpendicular to the first plane and the first direction. The support members are configured to support an underside of an electronic component.
